SUMMARY

I am Software Engineer or known among colleagues as "the guy who gets things done" simply because I have regularly taken on challenges outside my scope of work. My experience spans developing and testing GenAI web and mobile applications built on agentic AI architecture, along with building test suites and GitLab CI/CD pipelines around them.

SKILLS

Languages: JavaScript, TypeScript, Python, C++

AI & Agentic Systems: GenAI application development, AI/LLM evaluation, AI coding agents (Copilot, Kiro, etc.)

Testing & QA: Cypress (E2E), Integration/API Testing, Gitlab CI/CD, GitHub Actions

Frameworks & Libraries: React, React Native, Node.js, Express.js

Cloud/Databases: AWS, PostgreSQL, DynamoDB

WORK EXPERIENCE

Qaraton Technologies | Client: KONE

Aug 2025 – Present

Test Automation Engineer (Consultant)

Development

- Built frontend features in React, and developed backend functionality and APIs in Python, fixing bugs across both layers as they came up.
- Helped implement an AI agent for the application using the strands-agents framework, handling **10+** categories of troubleshooting queries
- Developed new agent and LLM features by implementing agent tools, writing prompts from scratch, refining wiring LLM tasks, etc.

Testing & Automation

- Designed and maintained Cypress E2E test suites for a GenAI-powered troubleshooting application, growing frontend test coverage from **20%** to **80%** across 10+ critical user flows and cutting manual regression time by an estimated **70%**.
- Built and ran AI evaluation tests assessing GenAI model answer quality, retrieval quality, faithfulness, and reliability, iterating on test scenarios to raise the AI evals pass rate from **25%** to **85%**.
- Performed API and backend testing to validate service integrations and data integrity across the application.
- Maintained and improved CI/CD pipelines to automate test execution and speed up release cycles

Reactron Technologies

Software Trainee

May 2024 - Nov 2024

- Completed a structured 1:1 mentorship learning React and React Native from the ground up, with regular code reviews and assigned exercises from a senior developer.
- Built ~10 self-directed projects to apply what I learned, including a PERN-stack book-tracking app with JWT auth and Google Books API integration, a car-locator app built in both React (web) and React Native (mobile) with live geolocation and a partial Netflix clone in React Native with TMDB API integration and video playback.

EDUCATION

Metropolia University of Applied Sciences | Helsinki, Finland

Aug 2021 - Aug 2025

Bachelor of Engineering in Information Technology | GPA: 4.4 / 5.0
